

# Data Affiliates V4.0 API Responses

## Summary

This is the list of responses used in the Data Affiliate API. Some of the responses apply to all HTTP POST methods (direct post, ping/post undersold /exclusive, and ping/post leg) but others may only apply to a single or sub-group of methods. Complete details on these responses can be found in the API Response section of the main [Data Affiliates V4.0 API Partner Specification](#) document. The reject/error responses list contains several XML Validation errors. These are a subset of many other similar errors that are possible. These errors all result from the XML in the request not adhering to the [XML Lead Schema](#).
